

smartSignalTest

Prevent smartphones from loss of signal

Prevent smartphones from loss of signal

- reliable
- safe
- simple

...simply **smart**

smartSignalTest is a software that checks if your smartphone is currently logged in to a network and if signal strength is sufficient.

In case of insufficient signal strength, an alarm message will be shown on the display and an alarm tone will be generated to inform the user about the unavailable network signal at his current location. The alarm automatically stops as soon as the phone enters network coverage again.

Possible field of application:

- Employed field staff shall be able to be contacted on their mobile phone, but the device is not ready-to-receive, so they will be informed about the situation and can change the location.

smartSignalTest covers the following field of application:

- Guarantee of being able to be contacted
 - Check whether network signal is available

Available for:

- All smartphones with Symbian OS 9.1 or higher using S60 platform, e.g.
 - Nokia E50, E60, E61, E65, E70, E90
 - Nokia N71, N73, N75, N76, N80, N91, N93, N95
